Trans. of Zeitschrift für Angewandte Physik (West

DESCRIPTORS: *Microwave bridges, *Measuring de-
vices (Electrical and electronic), *Electron spin reso-
nance, Microwaves, Klystrons, Frequency modulation,
Design, Measurement, X-band.

A description is given of a microwave system for re-
cording ESR signals; a limit of detection of $N_{min} =$
 3×10^7 H/G spins is attained with relatively little ex-
pense. A heterodyne system with only one klystron is
used, the heterodyne frequency being produced by mod-
ulation. Modulation of the carrier and frequency stabi-
lization are linked. (Author)

DESCRIPTORS: *Teletype systems, *Telegraph signals, Distortion, Oscillation, Test methods, Test equipment (Electronics), *Oscillographs, Communication theory.

The distortions of teletype signals have principally been measured by instruments using the stroboscopic method. Now measuring methods have been developed indicating the distortion factor by means of a cathode ray oscillograph. Beginning with the fundamental criteria being valid for measuring the general distortion factor as well as the relative distortion factor, known and new measuring methods are described. (Author)
